AIOROS

NODE BETA

AI Employees to optimize the operations & logistics **of your industry**

AIOROS offers its clients a pre-trained Artificial Intelligence model, which we call the AI Employee.

Clients can keep their data in their own cloud or local server.

Client:
Food, Logistics, Infrastructure, Agro

AI Employee:
Beta Node

Employee Role:
Predictive Maintenance

AIOROS offers an AI Employee that works alongside operations and logistics managers, maintenance engineers, and other professionals to provide predictive maintenance across the food, logistics, infrastructure, and agricultural sectors.

Data is collected by a set of up to five electronic devices called Beta Nodes, which connect to the client's sensors and send data to the client's cloud or local server.

The AI Employee undergoes retraining with the assistance of our engineers.

Business Example:
Cold Storage Warehouses

Alerts
Notifies managers of refrigeration failures, open doors, and other potential issues.

Predictions
Forecasts spoilage or temperature spikes in specific areas of the warehouse.

Reports
Provides guidance on defrosting schedules, when to turn compressors on or off based on electricity costs, and warehouse temperature mapping.

Greater efficiency for safer, more profitable operations.

65% – 95%
Increase in ROI through cost optimization.

24/7
Continuous monitoring of your operations.

How It Works

1. **Client's Sensors**
Beta Nodes connect to the client's sensors.

2. **Beta Nodes**
A set of up to five electronic devices collects data.

3. **Client's Cloud / Server**
Data is sent to the client's cloud or local server.

4. **AI Employee**
Analyzes collected data and undergoes retraining with our engineers.

Applications by Sector

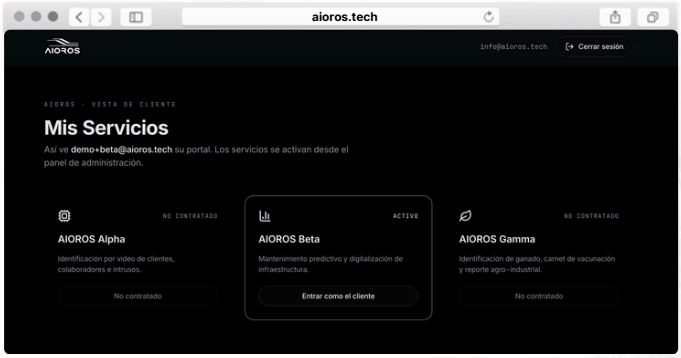

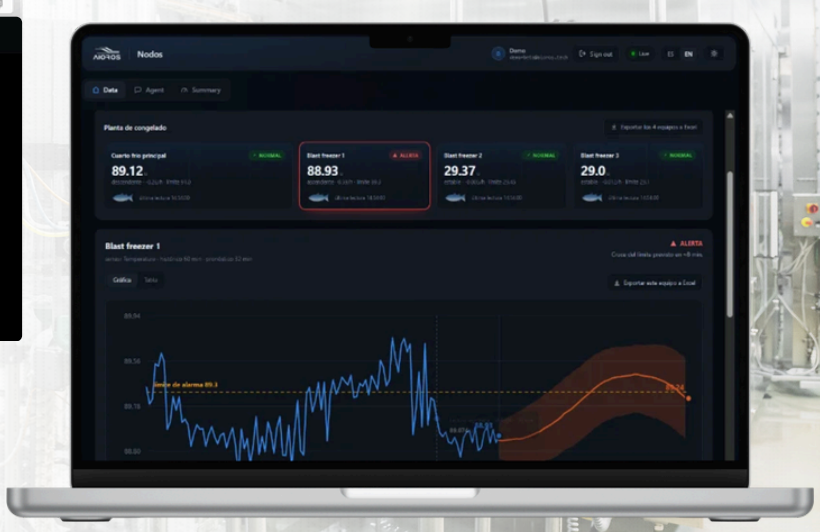

AIOROS Web Dashboard

Each client can view both the raw data collected and the analysis provided by the AIOROS AI Employee through a web dashboard, accessible with their user account.

Data visualization and analysis for monitoring and decision-making.
