AI Employees to increase milk production and optimize dairy farm operations

AIOROS offers its clients a pre-trained Artificial Intelligence model, which we call the AI Employee.

Clients can keep their data in their own cloud or local server.

Client:
Dairy Farms, Food Industries

AI Employee:
Gamma Node

Employee Role:
Predictive Milk Production & Health Monitoring

AIOROS offers an AI Employee that works alongside dairy farmers, veterinarians, and other professionals to support predictive milk production and health monitoring.

Data from the cows is stored on electronic cards called Gamma Nodes (one per animal).

The AI Employee connects to the client's database and undergoes retraining with the assistance of our engineers.

Business Example:
Dairy Farms

Alerts
Notifies farm owners or managers of milk production anomalies related to temperature, weight, or the condition of individual cows.

Predictions
Forecasts milk production and potential health deterioration or productivity declines in individual cows.

Reports
Indicates when to inseminate cows based on body temperature and identifies the most productive cows to help optimize their nutrition.

Healthier cattle, more productive and profitable dairy farms.

$8K – $12K
Annual return increase for a 100-cow farm.

24/7
Continuous livestock monitoring.

How It Works

1. Client's Cattle
Each animal has its own Gamma Node.

2. Gamma Nodes
Electronic cards that store data from each cow.

3. Client's Database
The AI Employee connects to the client's database.

4. AI Employee
Undergoes retraining with the assistance of our engineers.

Applications by Sector

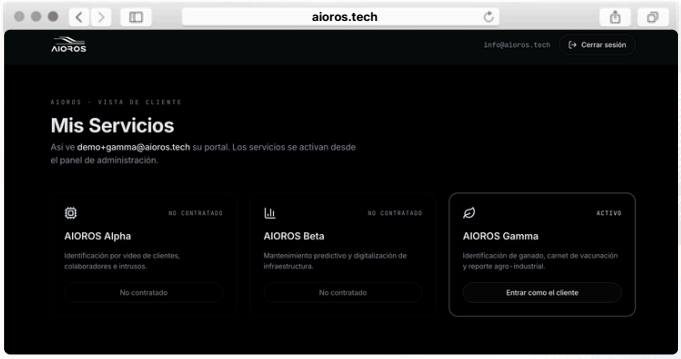

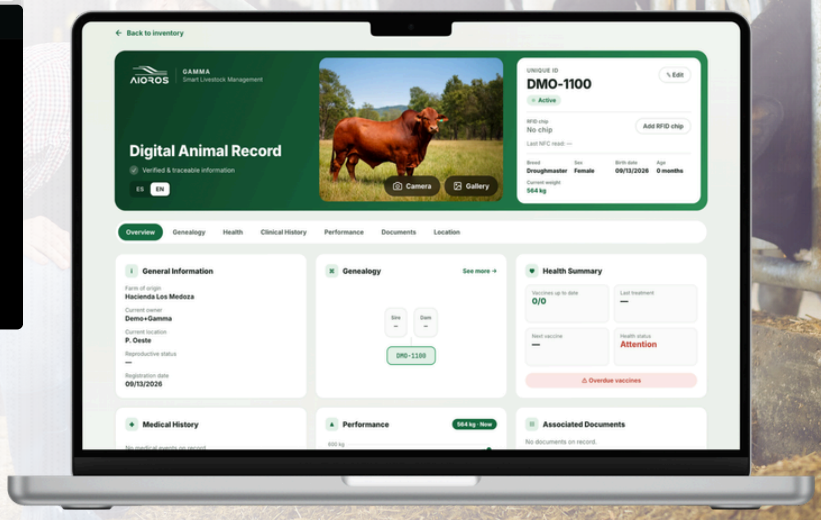

AIOROS Web Dashboard

Each client can view both the raw data collected and the analysis provided by the AIOROS AI Employee through a web dashboard, accessible with their user account.

Data visualization and analysis for livestock health monitoring and decision-making.
